Software Engineering Graduate

SUMMARY

Software Engineering undergraduate with experience in designing and developing web-based applications using modern technologies. Skilled in JavaScript, React.js, Next.js, and frontend development, with a strong understanding of software engineering principles, object-oriented programming, and the software development lifecycle. Experienced in building responsive user interfaces, integrating APIs, and working in Agile environments. Passionate about creating scalable, high-quality software solutions and continuously learning emerging technologies.

Education

Sri Lanka Institute of Information Technology (SLIIT) 2022 – 2026
BSc (Hons) in Information Technology Specializing in Software Engineering

Hillwood College Kandy 2019 – 2022
G.C.E. Advanced Level – Commerce Stream

Hillwood College Kandy 2017 – 2018
G.C.E. Ordinary Level

Experience

Software Engineering Intern Jun 2025 – Dec 2025
Tekly Solutions, Kelaniya

- Developed and maintained RESTful APIs for FurGlo, a pet care management system, handling core business logic and backend services.
- Designed and managed database schemas and collections to support pet profiles, schedules, appointments, and health records.
- Contributed to frontend development, building UI components and ensuring smooth frontend-backend integration.
- Tested and validated API endpoints, ensuring reliable communication between frontend and backend systems.
- Collaborated with a distributed team using Agile/Scrum, participating in daily stand-ups, sprint planning, and reviews.
- Managed version control, resolving conflicts and participating in code reviews to maintain code quality.

Speech and Drama Instructor 2022 – 2023
First Friends Campus

- Conducted sessions to enhance communication, creativity, and confidence
- Designed lesson plans and organized events for diverse age groups

President Guide 2021

- Led and managed guiding activities, fostering teamwork and leadership
- Organized initiatives to promote community engagement and collaboration

Technical Skills

Programming Languages: Java, C++, C, JavaScript, PHP, Python,
Frameworks: Node.js, React.js, Next.js,
Database Technologies: MySQL, MongoDB, SQL
Web Development: HTML, CSS, Bootstrap, Tailwind CSS
Tools: Jira, Draw.io, Trello, GitHub, Git, Figma, Docker, Kubernetes, VS Code
Concepts: MVC Architecture, OOP, Web APIs, Agile Methodologies, Algorithms
AI Skills: Generative AI, Prompt Engineering, Large Language Models (LLMs), Natural Language Processing, AI Solution Development

Projects

AI-Based Physics Learning Assistant (Final Year Research Project) | GitHub

- *Tech Stack: Python, NLP, React, Node.js, MongoDB, RAG, LLaMA (Ollama), FAISS, OCR Dataset Engineering*
- Developed an AI-based learning assistant for Sri Lankan A/L Physics students to provide structured, exam-oriented explanations. The system supports step-by-step theory explanations aligned with the local syllabus and past paper patterns. Worked on data preparation, prompt design, and improving output consistency to ensure reliable and clear responses for students.

Tourism Management System | GitHub

- *Tech Stack: MERN Stack (MongoDB, Express, React, Node.js)*
- Contributed to both requirements gathering and full-stack development of a MERN-based tourism management system, analyzing user and business needs to define core features and workflows. Built frontend components using React.js and developed backend REST APIs using Node.js and Express.js, while integrating MongoDB for data storage. Collaborated closely with the development team in an Agile environment, translating requirements into working features and ensuring smooth coordination between planning and implementation.

Food Delivery System | GitHub

- *Tech Stack: MongoDB, Express, React.js, Node.js, Tailwind, Docker, Kubernetes*
- Developed a microservice-based food delivery system using MERN stack architecture. The system features user authentication, restaurant management, menu ordering, and real-time order tracking. Customers can browse restaurants, place orders, and track deliveries, while restaurant owners manage menus and orders. Integrated secure payment gateway for transactions.

Pharmacy Management System | GitHub

- *Tech Stack: Java, JSP, Servlet, JDBC, MySQL, HTML, CSS*
- Developed a pharmacy management system to manage medicines, inventory, customer records, and order processing. Implemented CRUD operations, database integration, and user authentication while supporting efficient pharmacy operations and record management. Contributed to system design and requirement analysis to ensure the solution aligned with user and operational needs.

Smart Waste Management System | GitHub

- *Tech Stack: HTML, CSS, PHP, SQL*
- Developed a web-based waste management system featuring user authentication, geolocation mapping, and CRUD functionality. The system supports efficient waste collection planning and resource management through location-based tracking.

Soft Skills

Team Collaboration
Problem Solving
Adaptability
Stakeholder Communication
Time Management
Presentation & Public Speaking

Professional Certifications

Frontend Web Development: University of Moratuwa — Feb 2024 – Nov 2024
Python Programming: University of Moratuwa — Jan 2024 – Nov 2024
Project Management 101 (PMP Training): Simplilearn SkillUp

Leadership Extracurricular Activities

Treasurer: Commerce Club of Hillwood College
Member: Central Link Toastmasters Club
